

AQUANOVA HUMIC ACID

AQUANOVA Humic Acid, produced by Almada, is a powerful growth stimulant based on natural organic materials, formulated to improve soil structure and enhance nutrient absorption efficiency. This product, rich in humic and fulvic acids, stimulates root growth, increases microbial activity in the soil, and helps plants cope with environmental stress. AQUANOVA Humic Acid improves the physical and chemical properties of the soil, increases its capacity to retain water and nutrients, and ultimately boosts both the quantity and quality of the crop yield. It is suitable for use in all irrigation systems and for various types of crops, including field crops, orchards, and greenhouse cultivation. Regular use of AQUANOVA Humic Acid contributes significantly to soil stability and healthy plant nutrition.
