

# AQUANOVA IRON CHELATE 6% EDDHA (ORTHO-ORTHO 4.8)

AQUANOVA Iron Chelate 6% EDDHA Ortho–Ortho 4.8 is a highly effective fertilizer containing a combination of two ortho–ortho isomers, which provides rapid correction of iron deficiency in plants. The effects of this product are longer–lasting compared to other iron fertilizers available in the market. This product is formulated with 6% EDDHA chelated iron. Iron deficiency is a common issue for many plants, particularly due to high soil pH levels. AQUANOVA Iron Chelate helps improve plant and tree growth, prevents and treats iron deficiency, increases plant productivity, and enhances flower and leaf coloration.

## APPLICATION RATES & TIMING

Crop Type	Foliar Spray Rate	Timing
Fruit Trees	40–60 g / tree	Throughout the growth season, especially in the early vegetative and reproductive stages
Field Crops	15–30 kg / hectare	
Vegetables	1–2 kg / 1000 m <sup>2</sup>	
Greenhouse Crops	2.5–4 kg / hectare	

For optimal results, adjust the concentration based on crop requirements.
