

GREEN FEEDER PHOSPHATE FERTILIZER

Phosphorus is known as the “key to life” for plants due to its critical role in energy transfer and storage. It participates in all plant biochemical processes and is the second most important nutrient after nitrogen. Green Feeder Phosphate Fertilizer is designed for both current-season performance and to support strong initial growth in the following season.

Manufactured in Iran 

DOSAGE AND APPLICATION TIMING

Crop Type	Application Rate	Application Timing
Cereals	200–300 kg/ha	Before planting
Oilseeds	300–400 kg/ha	Before planting
Fruit Orchards	2–3 kg/tree	Before bud break
Vegetables and Cucurbits	200–300 kg/ha	Before planting
Potato, Onion, Sugar Beet	300–400 kg/ha	Before planting
Greenhouse Crops	5–10 kg/m ²	Before planting and during the growing season
Pistachio	2–3 kg/tree	Before bud break and kernel-filling stage

GUARANTEED ANALYSIS

Spent mushroom compost (SMC)	Organic Matter (OM)	Humic Acid (HA)	Phosphorus (P ₂ O ₅)	Calcium (Ca)	Sulfate (SO ₄)	pH	TE
60%	25%	2%	5%	0.7%	6.3	6.3	

APPLICATION METHOD

In field crops: apply before planting with a fertilizer spreader and incorporate through tillage.

In orchards: Green Feeder Potassium Fertilizer apply under the canopy and mix with surface soil or apply via trench method.
